

SET TOP BOXES:

A set-top box (STB) or set-top unit (STU) is an information appliance device that contains a tuner and connects to your television and an external source of signal, turning the signal into content which is then displayed on your television screen. Set-top boxes transform the signal from the cable to a form that can be used by the television set or other receiver. It also enhances the quality of signal from cable or satellite.

We Have Several Boxes for your use depending on what services you choose.

Our Set Top Boxes are rented to you when you sign up for our television service. They remain the property of TruVista and must be turned in to us after your service has been terminated or you decide to cancel your service.
